

Circular maintenance and refurbishment services for small electric fleets in coastal tourism

Sector: Marine infrastructures

Short description of the needs:

Tourism operators, marinas and coastal municipalities increasingly rely on small electric vehicle fleets, but the market lacks specialised maintenance and circular service solutions. Many vehicles are replaced prematurely due to minor failures, battery degradation or lack of qualified technicians, leading to unnecessary waste and higher costs. The objective is to develop a scalable circular service model based on preventive maintenance, refurbishment and digital diagnostics, extending vehicle lifetimes and reducing emissions. Cooperation opportunities include pilot projects with hotels, campsites, marinas and public authorities, as well as partnerships with research institutions and e-mobility SMEs.
